

# Contents

<b>Introduction</b>	<b>7</b>
<b>1 Definition of probability.</b>	<b>9</b>
1.1 Axiomatic definition. . . . .	9
1.2 Conditional probability. . . . .	11
1.2.1 Law of Total Probability . . . . .	12
1.2.2 Bayes' Theorem . . . . .	13
1.2.3 Summary of basic properties: . . . . .	14
1.3 Basic notions of combinatorics . . . . .	15
1.4 Excercises . . . . .	17
<b>2 Random Variable</b>	<b>51</b>
2.1 Concept of random variable . . . . .	51
2.2 Discrete random variable . . . . .	52
2.2.1 Distribution function . . . . .	52
2.2.2 Continuous random variable . . . . .	53
2.2.3 Probability density function . . . . .	53
2.2.4 Cumulative distribution function . . . . .	54
2.2.5 Interpretation of the concept of density function . . . . .	55
2.3 Parameters of a random variable . . . . .	56
2.3.1 Mean and Variance . . . . .	56
2.3.2 Moments . . . . .	56
2.3.3 Chebyshev and Markov inequalities . . . . .	57

2.4	Excercises . . . . .	58
<b>3</b>	<b>Bivariate Random Variables</b>	<b>71</b>
3.1	Joint Distribution . . . . .	71
3.1.1	Marginal and Conditional Distributions . . . . .	72
3.2	Statistical Dependence. Covariance. . . . .	74
3.3	Linear Regression . . . . .	75
3.4	Excercises . . . . .	78
<b>4</b>	<b>Probability Distribution Models</b>	<b>95</b>
4.1	Discrete Models . . . . .	95
4.1.1	Bernoulli Distribution . . . . .	95
4.1.2	Binomial Distribution . . . . .	95
4.1.3	Distribución de Poisson . . . . .	96
4.1.4	Poisson Distribution . . . . .	96
4.2	Continuous Models . . . . .	97
4.2.1	Uniform Distribution . . . . .	97
4.2.2	Distribución Exponencial . . . . .	97
4.2.3	Normal Distribution . . . . .	97
4.2.4	Central Limit Theorem . . . . .	101
4.2.5	Approximation of the Binomial Distribution by the Normal Distribution . . . . .	101
4.2.6	Chi-squared distribution . . . . .	102
4.2.7	t-Student distribution . . . . .	103
4.2.8	Fisher-Snedecor Distribution . . . . .	104
4.3	Excercises . . . . .	104
